

JDB Dangerous Goods Cabinets**PO Box 4045****Mt Maunganui****Ph: 0508 222 463**

Thank you for your enquiry regarding our Dangerous Goods Cabinets.

As you are aware demand is increasing for storage systems designed specifically for the secure and reliable containment of liquids belonging to Dangerous Goods Classes 3, 6 and 8 (flammable, toxic and corrosive, respectively). In response, **JDB** has developed a range of inexpensive, robust and practical Dangerous Goods Cabinets which meet or exceed all relevant Australian and New Zealand construction standards.

All cabinets are of double wall, electrogalvanised sheet steel (Zintec) construction, with a 40mm minimum interstitial space. Vents with fine mesh spark arrestors are included to conform with regulations.

Two adjustable shelves are supplied standard. All defined storage space is above the level of the spill tray. The cabinet door(s) is self closing, with robust hinges and two point lock. A left or right hand opening door is available.

A high quality powder coated internal and external finish ensures easy cleaning and a long maintenance free life. Cabinets intended for corrosive liquids can have a special chemical resistant coat applied to the inner surfaces of the spill tray and the top surfaces of the shelves. Internationally designated cabinet colours appropriate for the intended contents are standard, as are labels following regulatory requirements.

We at **JDB** are happy to design and construct cabinets to supplied specifications should our existing products not fulfil customer requirements.

Optional Extras

*A high quality heat insulation fill in the interstitial space.

*Air ventilation mountings for efficient fume extraction.

*Additional shelving.

Manufactured in New Zealand to conform to standards AS1940:1993, AS/NZS 4452:1997, A51NZS3833:1998, A52507 and A53780. Dangerous Goods Approval Number 673/98.

Should you require any further details, please do not hesitate to contact me.

Yours sincerely,

Jon Preston
